

Badr Mohamed

DATA ANALYST

Zagazig - EG | +201090834566 | ibadmohamed99@gmail.com | [LinkedIn](#) | [Portfolio](#)

Objective

Accounting graduate preparing for a career in data analytics and business analysis, with hands-on practice in SQL, Power BI, Excel, data cleaning, KPI analysis, and visualization. Focused on using data to explain business performance, identify patterns, and turn analysis into clear recommendations that a non-technical reader can understand.

Projects

Zara Sales Performance | SQL & Power BI & Excel | 2025 - Present

- Built a sales performance dashboard using SQL, Power BI, and Excel to organize Zara sales KPIs by product category, price tier, promotion impact, customer segment, and country of origin so performance could be reviewed faster and more clearly.
- Analyzed merchandising performance across product placement, premium vs. mid-range items, promotional activity, and women's vs. men's sections to compare revenue drivers and spot weaker areas.
- Identified business findings including premium products generating 40% of revenue, front-of-store placement producing roughly 2x higher sales, and seasonal promotions increasing mid-range volume by 35%.

Insurance Data Analysis Project | SQL & Power BI & Excel | 2025 - Present

- Analyzed insurance customer records using SQL, Power BI, and Excel to understand how age, BMI, smoking status, and region affect insurance charges.
- Segmented customers for risk profiling using SQL CASE statements, aggregations, and window functions, then used Excel and Power BI to compare cost patterns across customer groups.
- Found that smokers paid about 3-4x more than non-smokers, making smoking status the clearest cost driver in the dataset.

COVID-19 Data Analysis Project | SQL & Power BI & Excel | 2024-2025

- Investigated global COVID-19 data using SQL, Power BI, and Excel to calculate infection rates, death percentages, and rolling case averages across countries and continents.
- Compared countries and regions by identifying the highest infection rates relative to population and reviewing trend differences across Europe, Asia, and North America.
- Cleaned and prepared raw data in Excel with formulas and pivot tables, used SQL for calculations, and presented trends in Power BI for clearer reporting.

ETL Process & Database Management | SQL

- Performed a basic ETL workflow by extracting CSV and JSON files, cleaning and transforming the data with SQL, and loading the results into structured database tables for analysis.

Education

Zagazig University - Major: Bachelor of Commerce – English Section | Graduated: 2021

Technical Skills

- Languages & Querying: SQL (Joins, Aggregations, Window Functions, CASE statements)
- Data Visualization: Power BI (Dashboards, Interactive Reports, DAX, Power Query)
- Spreadsheets: Microsoft Excel (Pivot Tables, VLOOKUP, Data Cleaning, Formulas)
- Data Transformation: ETL Processes, Data Cleaning
